# LINGUISTICS OF THE TIBETO-BURMAN AREA VOLUME 11:2 - FALL 1988

# Sino-Tibetan \*Tongue and \*Lick1

# Robert S. Bauer University of Hong Kong

#### 1.0 Introduction

Gordon H. Luce's *Phases of Pre-Pagán Burma*, Volume II first alerted me to the potential fruitfulness of comparative work with southern Chinese dialects and Tibeto-Burman languages. In *Chart N*, *Tibeto-Burman Languages -- Chin (Zo) Group, Tone Pattern I* (Luce 1985:70-71), the following forms for 'tongue' (item #19) appear:

Xôŋsai Tedim Lushei	`tongue' lei lei <sup>1</sup> lei	Haka (Lai) Mătu <sup>1</sup> pi T'an p'um <sup>1</sup>	lei <sup>5</sup> lai <sup>4</sup> lai <sup>4</sup>
K'ualsim	lei	T'ă?oa*	lai*

Now, to someone familiar with Cantonese the striking phonetic similarity of the Chin forms with Cantonese lei 'tongue' (Zeng 1986:64) and lai 'lick' (ibid.:120) immediately leaps from the page and raises a couple of questions: What is the connection between the Cantonese and Tibeto-Burman forms? Why have they developed in such a similar way? With my curiosity kindled by these questions, I took another close look at Benedict's Sino-Tibetans A Conspectus and realized that in Cantonese alone—to say nothing of other southern Chinese dialects, there were forms which could be compared with two of Benedict's Tibeto-Burman roots for tongue; lick. Might other Chinese dialects also offer additional forms for comparison with his other Tibeto-Burman roots?

This paper is the fruit of my investigation of the relationship between forms for tangue and lick in southern Chinese dialects and several Tibeto-Burman roots as reconstructed by Benedict and Matisoff. In the following discussion I combined recent material on southern Chinese dialects Tibeto-Burman languages with that from my own fieldwork on bodypart nomenclature in southeastern Chinese dialects. The first part of the paper is devoted to Tibeto-Burman and is organized as follows: first, I have reproduced the Tibeto-Burman forms which form the basis for the reconstruction of the six roots by Benedict and Matisoff. Second, taking advantage of more recently-published material, I have appended additional Tibeto-Burman forms which appear to me on the basis of their phonetic shape to belong to these roots. The second part of the paper comprises the Simitic material and compares forms from the southern Chinese families of Yue, Kejia, Min, Xiang, and Southwestern Mandarin with these Tibeto-Burman roots. Finally, noting "the hot-house homogenizing atmosphere of South-East Asia" (Matisoff 1983a:63), I have included under the relevant roots Kadai (Austro-Tai) and Austro-Asiatic Icokalikes or comparabilia (Matisoff 1976:264).

A final introductory word: I recognize that in a broad-based comparative study one needs to be aware that phonetic-semantic

similarity can stem from at least four sources: cognation, contact borrowing, coincidence, or universal tendency. My assumption is that genetic relationship generally accounts for the connection between the Chinese forms and Tibeto-Burman roots. But some items are so similar they arouse suspicion, and I suspect that the other three "explanations" must also apply to some (unknown) extent. With South China's long history of intimate contact among various languages, opportunities for contact borrowing within or across genetic lines cannot be overestimated. However, I have not tackled the intriguing problem of identifying language donors borrowers. Finally, universal tendency may play a special role in the development of forms meaning tongue and lick: viz., many languages, regardless of genetic affiliations, display a tendency to select the apically-articulated lateral 1 as an initial or medial consonant in words with these meanings (cf. Bauer 1988).

#### 2.0 Tibeto-Burman Variant Roots for Tongue/Lick

Recognizing the phonetic-semantic interplay between tongue and lick, Benedict (1972) in his Sino-Tibetan: A Conspectus has reconstructed the following phonetically-related proto-variant Tibeto-Burman roots:

```
#(s-)lya'w

*(m-)lyak ~ *(s-)lyak

#(s-)lyam

*m-lay ~ *s-lay

Iick; tongue (p. 48, #211)

Iick; tongue (ibid.)

tongue; flame (ibid.)

tongue (p. 64, #281)
```

To this list Matisoff (1985:26) has recently added two more roots for tangue: \*-ley and \*-lya. As can be seen, all of these roots follow the typical canonical form of the Proto-Tibeto-Burman syllable (Matisoff 1972:275), namely,

It is interesting to observe that all of the roots above have last their initial consonant, an optional or obligatory consonantal prefix which alternates between m- and s-, and all have consonant finals or glide-endings. Although these roots are reconstructed for Proto-Tibeto-Burman, I would suggest that they can be pushed back further to Proto-Sino-Tibetan on the basis of cognate relationships drawn in the second part of this paper.

#### 2.1 Tibeto-Burman Root \*(m-)liak ~ \*(s-)liak Lick, Tongue

The two variant roots \*(m-)lick and \*(s-)lick 'lick, tongue' are reconstructed from the following forms (Benedict 1972:48):

```
lick 'to taste, try'
Lepcha
                    liak 'lick'
Written Burmese
                    la ~ le `lick'
Nung
Miri
                    jak 'lick'
Garo
                    srak 'lick'
                   liak 'lick'
Lushei
                    inlek 'lick'
Mikir
Tangkhul
                    khemelek 'lick'
                    khemerek (Bhat 1969:48)
Magari
                    let 'tongue'
```

To the above list I would add the following items:

ldág-pa 'lick' (Jäschke 1985:289) Written Tibetan ldak 'lick (impf.)' Hoshi Tibetan-Zangskar and Tsering 1978:52) dzak 'tongue (hon.)' (Nagano 1982:485) Tibetan-gLo dak/ ye 'lick' ibid. Tibetan-gLo Tibetan-Lhasa ta?" 'lick' (Jin 1983:182) Limbu lakma? (van Driem 1987) lhak-ke 'lick' (Hale 1973:106) Magari Jirel cyelaq 'tongue' (Hale 1973:51) celakq ~ celaq `tongue' (ibid.) Sherpa la?<sup>1</sup> 'lick' (Sun 1982:229) Trung-He lia?<sup>2</sup> 'lick' (Dai and Cui 1985:118) Achang-Luxi liap ~ le? 'lick' (ibid.) Achang-Longchuan mja fim 'lick' (Nishidaa 1966:24) Akha lw\_?ah 'lick' (Nishida 1968:33) Lisu lu 'lick' (Xu et al 1986:144) bè-nε 'lick' (Nishida 1967:865) Bisu (Akha, Lisu, Bisu < \*m-liak Thurgood 1977:197) le 'lick' (Chang 1986:116) Lahuna, Lahuxi

The Lahu forms have lost trace of the original stop ending, but I follow Nishida (1968:32) who associates his Lahushi le-ve and Lahuna le lu with Burmese ml'at-se 'to lick'. Matisoff (Benedict 1972:48, footnote #157) derives Lahu lê?/lé 'lick'/'feed an animal', a "simplex/causative pair", from Proto-Lolo-Burmese \*lick/\*?lick'.

Apparently as the result of borrowing, this root has a reflex in the Taunggyi (also called Taungthu) variety of Karen of south central Burma: Karen-Pa-O liak 'to taste, to lick' (Burling 1969:79); but Written Burmese liak is not the source of the loan according to Benedict (1972:141). As for Karen, the following varieties imply at least two different etyma for 'lick':

Karen-Moulmein Pho lén? 'lick' (Burling 1969:79-80)
Karen-Bassein Pho ?ân lên ibid.
Karen-Palaychi ?òq lí? ibid.
Karen-Moulmein Sgaw lé? ibid.
Karen-Bassein Sgaw lè ibid.

#### 2.2 Tibeto-Burman Root \*-lei Tongue

With reference to Walter French's Proto-Naga root \*C-lei tongue' (as reconstructed in his 1983 Ph.D. dissertation, Northern Naga: a Tibeto-Burman Mesolanguage, on the basis of Yogli li, Hancho le, Konyak ji, Phom jei), Matisoff (1985:26) has proposed a proto-variant root \*-lei based on Tiddim Chin lei and Jingpo Sinli 'tongue'. Additional cognate forms from languages of the Chin, Naga, and Baric groups include:

Xongsai lei 'tongue' (Luce 1985, Volume II:70-71 Khualsim lei ibid. Haka (Lai) lei ibid. Ngawn lei 'tongue' (Ono 1965:13)

```
Falam
lei ibid.

Khiamngan
lei `tongue' (Weidert 1979:119)
Tangsa
li ibid.
```

Forms from various languages of the Kuki-Chin group support the reconstruction of \*m-lei:

Mera (Darling) pě 11 'tongue' (Luce 1985, II:70-71) pě\li ibid. Lotu (Hriangpi) me/pěle<sup>I,4</sup> ibid. Lailenpi m le ibid. Womatu Amlg2 ibid. · Awa Khumi Asho (Sandoway) ibid. Anal pa-li 'tongue' (Ono 1965:13) Chinbok am-lei ibid. Kom m^lei 'tongue' (Weidert 1979:119) pe lei ibid. Lakher

Forms from the following Tibeto-Burman languages in Nepal appear to be related to the \*-lei root:

Tamang 'le 'tongue' (Hale 1973:51) Sunwar le ibid. Thakali le ibid. Chepang le ibid. Ghale-Keura li 'tongue' (Nishi 1982:177) Ghale-Barpak li ibid. Ghale-Gumda li ibid. Ghale-Uiya (Tularam) 11 ibid. Ghale-Uiya (Lanman) li ibid. le: z ibid. Tamang-Risiangku Gurung 'le ibid. Manang Gyaru le<sup>2</sup> ibid. (Nagano 1984:207) li<sup>2</sup> 'e ibid. (Hoshi 1984:138) Manang Prakaa

Two varieties of Menba, a Tibeto-Burman language spoken in Tibet, also have forms which appear to belong to this root: Menba-Motuo le and Menba-Suona le 'tongue' (Sun 1980:336). A variety of Yi, a Tibeto-Burman language spoken in Guizhou, appears to have a form cognate with this root: Yi-Dafang le 'lick' (Chen et al 1985:256). The following four Tibeto-Himalayan "dialects" have similar forms for 'tongue' (Sharma 1986):

Manchad (PaTani) lhe Bunan le Tinan le Kinauri le

Karen may also fit into the picture in some way. Cf. the following items meaning 'tongue' (Burling 1969:67-68):

Karen-Taungthu phre
Karen-Moulmein Pho phle
Karen-Bassein Pho phlé
Karen-Palaychi plé
Karen-Moulmein Sgaw ple
Karen-Bassein Sgaw ple

### 2.3 Tibeto-Burman Root \*m-lai ~ \*s-lai Tongue

Benedict (1972:64) has reconstructed \*m-lai ~ \*s-lai `tongue' on the basis of the following forms for `tongue':

ltse < Written Tibetan \*s-lai Dimasa salai Kanauri le phole < \*m-lai Nung Lepcha ali Vayu li Limbu le-sot Kachin lai Garo sre Lushei lei Mikir de

Forms for 'tongue' from other Tibeto-Burman languages which I believe also belong to this set include the following:

Kaike lai (Hale 1973:51) tge<sup>1</sup> (Jin 1983:174) \*s-lai > Tibetan-Lhasa Tibetan-Zangskar ltge (Hoshi and Tsering 1978:1) sa\_lai (Bhat 1969:149) Boro pw lai (Sun 1982:216) \*m-lai > Trung-Nujiang pu lai ibid. Trung-He (Sun et al 1980:336) Deng-Geman malai (Löffler 1960:531) Awa palai ibid. Areng \*?-lai > Rengmitca talai ibid.

#### 2.4 Tibeto-Burman Root \*(s-)liam Tonque; Flame

The proto-root \*(s-)liam `tongue; flame' has been derived from the following language forms (Benedict 1972:48):

Bahing liam 'tongue'
Khambu lem ibid.
Yakha lem ibid.

Written Burmese ahliam 'coruscation of flame'

Benedict (footnote #158, p. 48) suggests that "Kanauri and Theborlem 'lick' probably belong in this set . . ." Additional forms from several Tibeto-Burman languages in Nepal also belong with this root:

Tamang lehm-pā(m) 'lick' (Hale 1973:106)
Thakali lehm-la ibid.
Chepang lemh.sa ibid.
Khaling lem 'tongue' (Hale 1973:51)

#### 2.5 Tibeto-Burman Root \*(s-)lia'w Lick, Tongue

Benedict (1972:48) has reconstructed \*(s-)lig'w on the basis of Lushei hligu 'lick (as flames)' and Kachin Sinlgu 'tongue'. Possibly related to this root are the forms below:

Deng-Darang lio<sup>2</sup> 'lick' (Sun 1980:362)

```
Deng-Geman lo<sup>1</sup> ibid.
Nusu-South %io<sup>2</sup> 'tongue' (Sun and Liu 1986:146)
Nusu-South lio<sup>1</sup> 'lick' (ibid.:159)
```

### 2.6 Tibeto-Burman Root \*-lia Tongue

Matisoff (1985:26) has identified yet another root for 'tongue', namely, \*-lia, as the source of Written Burnese hlia and Lahu ha (-te); (also cf. Lahuna xa te and Lahuxi xa le [Chang 1986:103]). The following forms may be reflexes of the root:

```
lia" 'tongue' (Dai and Cui 1985:106)
Achang-Luxi
Achang-Lianghe lia ~ lia 'lick' (Dai and Cui 1985:118)
                7lia lick (Sun and Liu 1986:159)
Nusu-Central
                  lia ibid.
Nusu-South
                  manhlà 'tongue' (Bradley 1988:3)
Tako
                  men hla: 'tongue' (Nishida 1966b:70)
Bisu
                  mè lá 'tongue' (Nishida 1966a:36)
Akha
                  lah-t_hc_`tongue' (Nishida 1968:19)
Lisu
                  la tshw 'tongue' (Xu et al 1986:136)
Lisu
                  à là 'tongue' (Nishida 1966c:46)
Phunoi
                  tgālaà 'lick without eating/drinking'
Tibetan-Lhasa
                     (Goldstein 1984:250)
                  la 'tongue' (Chen et al 1985:242)
Yi-Nanjian
                  to ibid.
Yi-Dafang
                     `lick' (ibid.:256)
Yi-Nanjian
                  ji<sup>z</sup> la<sup>1</sup> `tongue' (Tian et al 1986:174)
dzi la ibid.
Tujia-North
Tujia-South
                  la<sup>2</sup> 'lick' (ibid.:189)
Tujia-North
Tujia-South lo ibid.
```

Pumi-Ginghua lie qho and Pumi-Taoba lie 'tongue' (Lu 1983:113) are tentatively linked to this root.

Bradley (1985:43) assigns Haoni p  $10^4$  'tongue' to his Proto-Loloish root  $\#7-1(i)a^4$ . Forms from the following Hanilanguages appear to belong with it as well:

```
Hani-Dazhai la ma 'tongue' (Li and Wang 1986:170)
Yani-Gelangho me la ibid.
Hanoi-Shuigui p lo ibid.
Biyue-Laiyuan a la ibid.
```

# 3.0 Archaic Chinese \*d'iat ~ \*liam £ Tongue

- (1) Tibeto-Burman \*(m-)liak ~ \*(s-)liak (1972:165, note #442) is compared with Karlgren's Archaic/Ancient Chinese d'iat/dź'iät (GS#288a, Karlgren 1966:201) [ 5 ] 'tongue'. Benedict says the source of the Chinese word is the root \*g'liat [ 5 ] 'tongue', a doublet of g'iak which is derived from \*g'liak [ 6 ] 'tongue' (however, it may be worth noting that this graph now means 'upper jaw': cf. Li Zhoumin 1980:335). With \*g'liat contrast Bodman and Baxter's Old Chinese \*?liet 'tongue' (Bodman 1987:4).
- (2) Tibeto-Burman \*(s-)liam 'tongue; flame' (page 172, note #458) is compared with Archaic/Ancient Chinese \*t'iam/t'iem [右秦] 'lick, taste' (not in GSR) which is derived from (Sino-Tibetan?

Proto-Chinese?) \*liam/\*liem. Benedict notes "the Cantonese reading li'm" which has the same meaning and claims that "this root [\*(s-)liam] is also represented in Chinese by the 'hidden' word for 'tongue' (\*d'iem ~ \*d'iam < \*liam ~ \*liam [舌]), explaining the use of [右] as phonetic in \*d'iam/d'iem [台] 'calm' and \*sriam/siam [台] 'sharp'..., also in \*d'iam/d'iem [台] 'sweet' (not in GSR)..."

Luce (1985, Volume II:117) compared Hritten Burmese Thia, Hritten Tibetan Ice, Ljags, and Karlgren's Archaic Chinese d'jat 'tongue' but proposed no proto-form; for 'lick' (p. 111) he was not able to find any Archaic Chinese reconstruction which could be related to Hritten Burmese liak and Hritten Tibetan Idag-pa.

With regard to the comparison of Tibeto-Burman roots and Chinese dialect forms, my own purpose is fairly modest: I have collected forms for 'tongue' and 'lick' found in various southern Chinese dialect families of Yue, Kejia, Min, Southwestern Mandarin, and Xiang and have sorted them on the basis of their phonetic shape into the Tibeto-Burman root categories listed above. Patterns of striking phonetic similarity between the two groups suggest that the Chinese forms share cognate (and loan) relationships with the Tibeto-Burman roots.

#### 3.1 Chinese-Min and Tibeto-Burman \*(m-)liak $^*$ \*(s-)liak

It is primarily within the Min dialect family that we find a number of forms which appear to be related to the proto-variant forms of T-B \*ligk. This is not surprising in view of the general understanding among Sinologists that the Min group split off very early from Proto-Chinese.

```
liek (~ 8iek) 'tongue' (Nakajima 1979:134)
Min-Fuzhou
               lia? 'lick' (Li and Chen 1985:158)
Min-Fuzhou
               lei? 'lick' (ibid.)
Min-Gutian
               le<sup>7</sup> _'lick' (ibid.)
Min-Zhouming
               le? 'lick' (ibid.)
Min-Fuding
               te? 'tongue' (ibid. 99)
Min-Putian
               li' 'lick' (ibid. 158)
Min-Youxi
               la<sup>7</sup> 'lick' (ibid.)
Min-Yongan
               la 'lick' (ibid.)
Min-Jianou
               lye? 'tongue' (ibid. 99)
Min-Jianyang
               lyge 'tongue' (ibid.)
Min-Songxi
               la 'lick' (ibid. 158)
Min-Jianyang
               lp7_'lick' (ibid.)
Min-Songxi
               lep lick (ibid.)
Min-Ningde
               liap 'liap' (Maciver 1982:398)
Kejia
               ye 'tongue' (Li and Chen 1985:99),
Min-Jianou
               iε lie 'tongue' (Wang 1979b:234)
Linghua
```

The raised numbers 7 and 8 attached to the end of each form indicate that they belong to the Rusheng tone category whose morphosyllables historically had -p, -t, -k endings. In all cases except three the stop ending has either reduced to -? or has been rephonologized as a distinctive tone contour. Hin-Fuzhou tshui liek (~ Giek) 'tongue' (but tshui lie? in Hanyu Fangyan Cihui:194) appears to retain -k. On the basis of Hin-Ningde lsp' we might infer that the original identity of the stop ending in Min may have been -p and not -k. Such a conclusion is further supported by Kejia liap 'to lick'. However, for the moment I

reserve judgment on the matter because I suspect there was variation between liak and liap. Evidence for such variation in Tibeto-Burman is found in Achang-Longchuan liap (Dai and Cui 1985:118) and Kham lep-nya (Hale 1973:106) 'lick'. Contrast Kadai: Li-Jiamao tep (Ouyang and Zheng 1983:485) and Shui lia:k' (Zhang 1980:99) 'lick'. With respect to the apparent loss of the l-initial in Min-Jianou ye and Linghua is lie 'tongue', we can compare the parallel development in Modern Burmese je? and Atsi jo? 'lick, lap' (Yabu 1982:28) < Tibeto-Burman \*-lick.

Finally, this root also appears to have some connection with Austro-Asiatic where we find the following forms meaning 'lick' but showing some phonetic similarity to Magari let and Kachin finlet 'tongue' (again of Bodman and Baxter's Old Chinese \*7liet 'tongue'):

Wa

let 'lick' (Zhou and Yan 1984:177)

Bulang-Xinmane
liat ibid. (Li, Nie, Qiu 1986:106)

Deang
liat ibid. (Chen, Wang, Lai 1986:135)

Kammu
klê:t ibid. (Svantesson 1983:24)

Danaw
kăliêt ibid. (Luce 1965:116)

Black Riang
Palaung-Panku
lêt 'lick' (Zhou and Yan 1984:177)

liat ibid. (Li, Nie, Qiu 1986:106)

liat ibid. (Chen, Wang, Lai 1986:135)

klê:t ibid. (Luce 1965:116)

liêt ibid.

Mundari
le? 'tongue' (ibid.:122)

#### 3.2.1 Chinese and Tibeto-Burman \*-lei Tongue

Matisoff (1985:26) reconstructed \*-lei on the basis of Tiddim Chin lei and Jingpo Sin li 'tongue'. Tibeto-Burman forms listed above in section 2.2 show a strong similarity to forms for 'tongue' from a number of Yue dialects as well as some Kejia, Min, and Southwestern Mandarin varieties:

```
lei 'tongue' (Beijing Daxue 1964:194)
Yue-Guangzhou
                   lei<sup>5</sup>
                        (Lau 1977:500)
Yue-Hongkong
Yue-Yangjiang
                   lei (Beijing Daxue 1964:194)
                   lei (Bauer 1985a)
Yue-Conghua
Yue-Zhongshan
                       (Chan 1980:126)
Yue-Taishan
                   li (Cheng 1973:281)
                   li tim (Bauer 1985a)
Yue-Yulin
                   li<sup>2</sup> (Bai 1987:4)
Yue-Huaiji
Yue-Gaozhou
                   lei thau ibid.
                   lei ibid.
Yue-Lianjiang
                   lei ibid.
Yue-Yangchun
Kejia-Meixian
                      (Beijing Daxue 1964:194)
                   li ma (Bauer 1986a)
Kejia-Danshui
                   sigt lei (Huang 1987:94)
Kejia-Lianping
                      (Huang 1987:94)
Kejia-Huizhou
                   li tchien (Huang 1987:94)
Kejia-Wengyuan
                   li 'tongue (of large domestic animal)'
Kejia-Yongding
                      (Huang 1983:226)
Min-Hongkong
                      (Bauer 1986a)
                   li<sup>5</sup> (Zh<u>a</u>ng 1987:36)
Min-Shaqi
                   tau<sup>2</sup> li<sup>5</sup> (Zhang 1987:36)
Min-Nanlang
                   li tshe (Bauer 1985a)
Mandarin-Liuzhou
                   ni tsi 'pig tongue' (Liang 1982:242)
Mandarin-Chengdu
                   Ti tsy ibid. (Luo et al 1987:132)
```

Bauer, R.S. 1988, "Sino-Tibetan \*tongue and \*lick", in Linguistics of the Tibeto-Burman Area, vol. 11, no. 2, pp. 144-165. (purl.org/sealang/bauer1988sino.pdf)

majority li-forms as representative of the etymon and reconstruct Ancient Chinese \*li.

Austro-Tai "lookalikes" include the following:

Li-Yuanmen

Dai-Xishuangbanna

Dai-Dehong

Tai Lo, Maw, No

Tai Khamti

Zhuang-Longzhou

Miao-Shui-wei

Li-Yuanmen

lei 'lick' (Ouyang and Zheng 1983:485)

lei bid. (Yu and Luo 1983:123)

lei bid. (Harris 1975:219)

lei bid. (Harris 1976:132)

lii bid. (Wei and Tan 1980:117)

mple 31 'tongue' (Chang Kun 1976:149).

# 3.2.2 Yue Folk Etymology for 外 lei Tongue

Although the modern reflexes of this Chinese reconstructed as \*li show a widespread distribution among southern Chinese dialect families and a broad geographical dispersal from Fujian through Guangdong and Guangxi and up to Sichuan, the ancient rhyme books and dictionaries which sometimes contained graphs with commentaries attributing them to particular dialects (as described by Downer 1981) seem not to have recorded such a graph that can be related to the Chinese root \*li (Bai 1980 lists a morpheme plus graph for 'lick' to be discussed below nothing for 'tongue'). This omission may have helped to perpetuate a Yue-centric folk etymology purporting to explain the origin of Yue-Guangzhou lei<sup>5</sup>. This etymology which is widely accepted among Chinese linguists runs as follows: Because the standard pronunciation of [ 🗲 ] is homophonous with Yue-Guangzhou sit 🔭 `to lose' (sometimes written with the Cantonese graph [ 🔂 ] and sometimes with the standard Chinese graph [智久] which is actually pronounced sik<sup>®</sup>) as in the phrase\_[黄古本 ] sit pun to go bankrupt', a taboo has replaced sit with lei which is taken from the lucky expressions [音本] ] kat lei 'lucky' and [盈本] ] jiŋ² lei 'profit'; the flesh radical was then added to [4] ] to make the character for 'tongue' (Yuan 1960:210; Qiao 1975:97; Rao et al 1981a:125; Rao et al 1981b:93). It is true that Cantonese-speakers are superstitious and do have their lucky and taboo expressions. However, the question of why "lei" was chosen and not some other propitious-sounding morphosyllable is never addressed in this story. In spite of the taboo or perhaps because of it, sı t pejorative-type quadro-syllabic expressions containing 'tongue' are found in Cantonese, e.g., [ **订页写 頂**台 ] \_ten<sup>3</sup> tsæy 3 ten sit rebuke with sarcastic remarks; [以集 去 ] thim sit wat 'glib-tongued'; [沙切 清 方 ] jau tsœy hau wat ] jau tsæy sit 'glib-tongued' (Chen 1980:142). Yuan (1960:171) invokes the same folk etymology to explain Hakka-Meixian li<sup>b</sup>. In view of the number of Chinese dialects and Tibeto-Burman languages with reflexes of \*li and \*-lei, however, it must be seen as a myth.

# 3.3 Chinese-Yue and Tibeto-Burman \*(m-)lai ~ \*(s-)lai Tongue

We find the following Yue and Min forms which mean 'lick' for comparison with Tibeto-Burman \*(m-)lai \* \*(s-)lai:

Yue-Guangzhou lai 'lick' (Zhan and Cheung 1987:92)
Yue-Hongkong lai ibid.
Yue-Aomen (Macau) lai ibid.
Yue-Shunde lai ibid.

Bauer, R.S. 1988, "Sino-Tibetan \*tongue and \*lick", in Linguistics of the Tibeto-Burman Area, vol. 11, no. 2, pp. 144-165. (purl.org/sealang/bauer1988sino.pdf)

Yue-Zhongshan	_	ibid.
Yue-Zhuhai	_	ibid.
Min-Nanlang	lai <u>"</u>	ibid.
Min-Longdu	lai <sup>#</sup>	ibid.

Standard Cantonese reading and colloquial pronunciations are associated with the graph [5][1], namely, Yue-Guangzhou sai and lai seems eminently relatable to the Tibeto-Burman variant root \*(s-)lai 'tongue': sai could have developed through the prefix preempting the initial 1-, while lai developed from the loss of the prefix.

Benedict classifies Miao as an Austro-Tai language, but Miao-Dananshan mplai (Wang 1985:168) and Miao-Hsien-chin mplai 24 (Chang Kun 1976:149) 'tongue' may have some connection to the T-B root (cf. Benedict 1975:328 Proto-Hiao-Yao \*mblic from \*mbli(d)a). Cf. Austro-Asiatic Vietnamese lumi 'tongue' (Nguyen 1966:266).

# 3.4.1 Chinese-Kejia, Yue and Tibeto-Burman \*(s-)liam Tongue; Flame

The following Kejia and Yue dialect forms all meaning 'lick' are compared with Tibeto-Burman \*(s-)liam:

```
liam 'lick' (Bauer 1985a)
Kejia-Danshui
                   lian (Huang 1983:238)
Kejia-Yongding
                   liam (Zhan and Cheung 1987:189)
Yue-Taishan
                   li<sup>®</sup>m³ ibid.
Yue-Enping
Yue-Doumenzhen
                   lim ibid.
                   lim ibid.
Yue-Foshan
                   lim (Rao et al 1981:129)
Yue-Guangzhou
                   lim (Yue-Hashimoto 1972:259)
Yue-Hongkong
```

In the above list we note that <code>Kejia-Danshui</code> liam<sup>3</sup>, <code>Yue-Taishan</code> liam<sup>3</sup>, and <code>Yue-Enping</code> liam<sup>3</sup> closely parallel the Tibeto-Burman root. Bai (1981:85) claims <code>Yue-Guangzhou</code> lim<sup>3</sup> has a variant form lem<sup>3</sup>, and either can occur in the reduplicated phrase lei<sup>6</sup> lim<sup>9</sup> stick out the tongue and lick the corners of the mouth'. However, neither Yue-Hashimoto (1972) nor <code>Rao</code> et al (1981) recognize the morphosyllable lem as one in the standard <code>Cantonese</code> syllabary (-em is found only in loanwords, cf. kem<sup>4</sup> < "game" Bauer 1985c:107, <code>tfem<sup>4</sup> < "jam"</code> Cheung 1972:217), so it may be a loan from some other (currently unknown but possibly Yue) dialect. It is certainly an interesting form with respect to its <code>-em-rhyme</code>

Bauer, R.S. 1988, "Sino-Tibetan \*tongue and \*lick", in Linguistics of the Tibeto-Burman Area, vol. 11, no. 2, pp. 144-165. (purl.org/sealang/bauer1988sino.pdf)

Yue-Taishan and may represent some intermediate stage between -iam and -im.

Kadai comparabilia include the following:

```
Mulao-Siba lia:m<sup>5</sup> 'lick' (Wang and Zheng 1980:13)
Li-Qiandui le:m<sup>1</sup> 'lick' (Ouyang and Zheng:1983:485)
Li-Tongshi li:m<sup>2</sup> 'lick' (ibid.)
Be-Limkow lim<sup>4</sup> 'tongue, lick' (Hashimoto 1980:154)
Be-Qiongshan lim<sup>4</sup> 'lick' (Zhang et al 1985:430)
Be-Chengmai lim<sup>4</sup> ibid.
Siamese lim<sup>4</sup> 'taste (elegant)' (Haas 1985:485)
```

Cf. Austro-Asiatic: North Vietnamese liem<sup>2</sup>, South Vietnamese lim<sup>2</sup> (Nguyen 1966:244), Jing (=Vietnamese) liem<sup>3</sup> 'lick' (Duyang, Cheng, and Yu 1984:140).

# 3.4.2 Chinese-Kejia, Min lim 'drink'

On the basis of their phonetic/semantic similarity, we can compare the following forms meaning 'drink' and 'suck' ('slurp'?) from Kejia and Min and Tibeto-Burman \*(s-)liam:

```
Kejia-Sixian lim<sup>1</sup> 'drink' (Hashimoto 1972:16)

Kejia-Sixian lim<sup>1</sup> 'suck' (lim<sup>1</sup> thon<sup>1</sup> 'suck soup')

(ibid.)

Min-Xiamen lim<sup>1</sup> 'drink' (Beijing Daxue 1964:253)

Min-Chaozhou lim<sup>1</sup> ibid.

Min-Taipei lim<sup>2</sup> ibid. (Zhang Zhenxing 1983:111)
```

Hanyu Fangyan Cihui (p. 253) claims that the Xiamen and Chaozhou forms are related through borrowing to Halay lemak, but this seems highly doubtful because this Malay word means 'fat (of meat); grease' (Yusop 1984:157), and secondarily 'a type of freshwater fish' or 'a type of tree' (Abas 1983:412). I suggest that the above forms are related to Yue-Guangzhou lim which is both phonetically and semantically closer than the Malay item. The Min forms, however, have undergone a semantic shift.

#### 3.5 Chinese-Min and Tibeto-Burman \*(s-)lig'w Lick; Tongue

In four Min dialects we find forms for comparison with Tibeto-Burman \*(s-)lia'w `lick; tongue':

```
Min-Putian litu<sup>5</sup> 'lick' (Li and Chen 1985:158)
Min-Fuzhou neu<sup>1</sup> ibid. (Beijing Daxue 1964:256)
Min-Shuibei lut<sup>5</sup> 'tongue' (Zheng 1985:40)
Min-Shipo lye<sup>2</sup> ibid.
```

There is a Kadai "lookalike": *Gelao* liu<sup>6</sup> 'lick' (He 1983:82).

#### 3.6 Chinese-Xiang and Tibeto-Burman \*-lia Tongue

With \*-lia we relate the following Chinese forms:

```
Xiang-Hengyang lia<sup>1</sup> 'lick' (Li Yongming 1986:298)
Linghua lia<sup>2</sup> ibid. (Wang 1979b:237)
Mandarin-Chengdu nia<sup>2</sup> ibid. (Liang 1982:242)
```

Previous comparisons have turned up items shared mainly by Yue, Kejia and Min and these are fairly concentrated in the southeastern provinces of Guangdong and Fujian. But the above three diapoints form a broad triangle that joins three different dialect families and spans several provinces further south and west. Xiang is spoken in the south central province of Hunan and Linghua further southwest in nearby Guangxi. Northwest in Sichuan Chengdu dialect is representative of southwestern Mandarin in which n- and l- are not phonemically distinctive, a feature found in many Chinese dialects, usually those south of the Yangzi River. With more forms for 'tongue' and 'lick' from more diapoints within this triangle we might be able to determine the significance of \*-lia among the Chinese dialect families.

We find the following \*-liq-"lookalikes" in Kadai:

Siamese lia (Haas 1985:493)
Lao lia (Marcus 1970:123),
Dong lia 'lick' (Liang 1980:106; Wang Jun
1984:841)
T'ien-chow lia 'lick' (Li 1977:127)

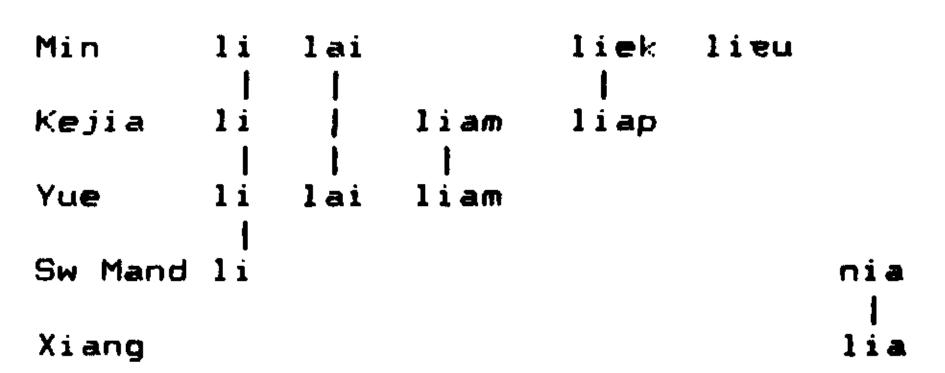

and in Austro-Asiatic:

Kammu lla 'lick' (Svantesson 1983:26)
White Striped Riang lia\ ibid. (Luce 1965:128)
Khasi dziliah ibid.

#### 4.1 Conclusion

This study has investigated the distribution of forms for 'tongue' and 'lick' in a number of southern Chinese dialects and has compared them with six Tibeto-Burman roots. This lexical evidence has been presented to support the conclusion that many of the Chinese forms are cognate to the Tibeto-Burman roots. A pattern of cross-dialectal ties among the Chinese dialect families can be represented as below:

Figure 1. Cross-Chinese dialectal ties for 'tongue' and 'lick'

In Min we find four roots represented and in Kejia and Yue three, but only reflexes of \*li connect four of the five dialect families. Still, this lexical affinity for 'tongue' across Yue, Kejia, and Min may give some support to Norman's claim that these three dialect groups descend from a common source he terms "Old Southern Chinese" (1988:210). One should also keep in mind that some of the Chinese items may be loans from Tibeto-Burman languages. We can note that similar forms are not found in the conthese.

southwestern ones whose contact with Tibeto-Burman languages has been historically more recent. Linguistic exchange may account for the close phonetic similarity observed between some Chinese and Tibeto-Burman items. In this regard, Ramsey has made tantalizing hints that "the varieties of Chinese spoken in South China still have some features of earlier, non-Sinitic languages. . . [i]n vocabulary, too, there is evidence for non-Han substrata" (1987:36, 37). However, he provides no lexical examples of these non-Han substrata, so this is a task still waiting to be done.

# 4.1 Summary Table of Tibeto-Burman Roots and Chinese Forms

All the Chinese forms discussed above are listed below under their relevant Tibeto-Burman roots for ease of reference:

```
1. *(m-)liak ~ *(s-)liak `lick; tongue'
          Min-Fuzhou liek (~ @iek) 'tongue' (Nakajima 1979:134)
                         lia? 'lick' (Li and Chen 1985:158)
          Min-Fuzhou
                         lei? 'lick' ibid.
          Min-Gutian
                         le'_'lick' ibid.
          Min-Zhouming
                         le?7 'lick' ibid.
          Min-Fuding
          Min-Putian
                         $ε?<sup>™</sup> `tongue' (Li and Chen 1985:99)
                         li" 'lick' ibid.
          Min-Youxi
                           'lick' ibid.
          Min-Yongan
                         la' 'lick' ibid.
          Min-Jianou
                         la' 'lick' ibid.
          Min-Jianyang
                            'lick' ibid.
          Min-Songxi
                         lp
                          lep'_'lick' ibid.
          Min-Ningde
                         liap 'lick' ((Maciver 1982:398)
          Kejia
                         lye? 'tongue' (Li and Chen 1985:99)
          Min-Jianyang
                          lyge 'tongue' ibid.
          Min-Songxi
          Min-Jianou
                             'tongue' ibid.
                             lie 'tongue' (Wang 1979b:234)
          Linghua
                          ie'
```

# 2. \*-lei 'tongue'

```
lei 'tongue' (Beijing Daxue 1964:194)
Yue-Guangzhou
                     lei (Lau 1977:500)
Yue-Hongkong
                     lei (Beijing Daxue 1964:194)
Yue-Yangjiang
                         (Bauer 1985a)
Yue-Conghua
                     lei`
                     li
Yue-Zhongshan
                         (Chan 1980:126)
                     li
                         (Cheng 1973:281)
Yue-Taishan
                     li<sup>6</sup> tim<sup>1</sup> (Bauer 1985a)
Yue-Yulin
                     li<sup>2</sup> (Bai 1987:4)
Yue-Huaiji
                     lei º
                         thau ibid.

                     li<sup>5</sup> 'tongue (animal)' (Huang 1983:226)
Kejia-Yongding
                     li (Bauer 1986a)
Min-Hongkong
                     li<sup>3</sup> (Zhang 1987:36)
tau<sup>2</sup> li<sup>3</sup> ibid.
Min-Shaqi
Min-Nanlang
                       <sup>5</sup> tʃhe️<sup>z</sup> (Bauer 1985a)
Mandarin-Liuzhou
                     ni tsi
Mandarin-Chengdu
                              `pig tongue' (Liang 1982:242)
                     Ti tsy ibid. (Luo et al 1987:132)
```

Bauer, R.S. 1988, "Sino-Tibetan \*tongue and \*lick", in Linguistics of the Tibeto-Burman Area, vol. 11, no. 2, pp. 144-165. (purl.org/sealang/bauer1988sino.pdf)

```
3. *(m-)lai ~ *(s-)lai `tongue'
                              lai 'lick' (Zhan and Cheung 1987:92)
          Yue-Guangzhou
          Yue-Hongkong
                              lai ibid.
          Yue-Aomen (Macau)
                              lai ibid.
          Yue-Shunde
                              lai
                                   ibid.
          Yue-Zhongshan
                              lai
                                   ibid.
          Yue-Zhuhai
                              lai ibid.
                              lai ibid.
          Min-Nanlang
          Min-Longdu
                              lai ibid.
4. *(s-)liam 'tongue; flame'
                                    'lick' (Bauer 1985a)
          Kejia-Danshui
                              liam
                              lian
                                           (Huang 1983:238)
          Kejia-Yongding
          Yue-Taishan
                                    (Zhan and Cheung 1987:189)
                              liam"
                                    ibid.
          Yue-Enping
          Yue-Doumenzhen
                              lim T
                                    ibid.
                              lim<sup>5</sup>
          Yue-Foshan
                                    ibid.
                              lim (Rao et al 1981:129)
          Yue-Guangzhou
                              lim (Yue-Hashimoto 1972:259)
          Yue-Hongkong
5. *(s-)lia'w 'lick; tongue'
          Min-Putian
                            lieu 'lick' (Li and Chen 1985:158)
          Min-Fuzhou
                            neul 'lick' (Beijing Daxue 1964:256)
                            lum 'tongue' (Zheng 1985:40)
          Min-Shuibei
                            lye ibid.
          Min-Shipo
6. *-lia `tongue'
          Xiang-Hengyang lia<sup>1</sup> 'lick' (Li Yongming 1986:298)
          Mandarin-Chengdu nia 'lick' (Liang 1982:242)
                            lia 'lick' (Wang 1979b:237)
          Linghua
                              Endnotes
     <sup>1</sup>This is a revised version of a paper entitled "'Tongue' and
'Lick' in Southern Chinese Dialects and Tibeto-Burman Roots for
'Tongue/Lick'" which in turn was a revised section from "Cognation
of Bodypart Terms across Chinese Dialects, Part II" (Bauer 1986b).
     <sup>2</sup>In addition to comparing Yue-Guangzhou lei<sup>8</sup> 'tongue'
Tibeto-Burman *-lei, I have also compared pei 'leg'
Tibeto-Burman *pei ibid. (Bauer 1987). Here I would like to list a
few more sets for Cantonese/Tibeto-Burman root comparisons:
                             jap 'to wave hands' (Yue-Hashimoto
     1. Yue-Guangzhou
                                    1972:285)
                             jep" 'wave the hand' (Zeng 1986:132)
                             jap 'fan; to fan' (Luce 1985:124)
          Written Burmese
          Written Tibetan (g)iab-mo 'the act of fanning, waving'
                                     (Jäschke 1985:507)
                            *ja'p 'fan, wave' (Matisoff 1983b:468)
          Tibeto-Burman
                             khe<sup>1</sup> 'shit' (Rao et al 1981:109)
     2. Yue-Guangzhou
                             kh@ 'excrement' (Nishida 1967:62)
          Lahu na

Tibeto-Burman

- 3. Yue-Guangzhou na 'female suffix' (Rao et al 1981:157) Tibeto-Burman \*(m-)na 'mother, older sister, daughter-in-law' (Benedict 1972:187)
- 4. Yue-Guangzhou let<sup>7</sup> 'slip, fall off' (Rao et al: 1981:123)

  Written Burmese lwat 'be free' (Matisoff 1985:12)

  hlwat 'free, release'

  Written Tibetan glod-pa 'loosen, relax, slacken'

  Tibeto-Burman \*q-lwat
- 5. Yue-Guangzhou hei<sup>1</sup> 'vulva'
  Tangkhul hoi ibid. (Matisoff 1985:54)
  Limbu hi-rā ibid.
  Tibeto-Burman \*hei/kei ibid. (Benedict 1979:30, but
  T-B root taken from comment by Matisoff under note 40)
- 6. Yue-Guangzhou lou<sup>®</sup> 'guy' (Yue-Hashimoto 1972:273)
  Written Burmese lu: 'person, man (Yabu 1982:39)
  Tibeto-Burman \*lu:

 $^3$  Transcription convention: medial and final T-B "y" (palatal glide) is rewritten here as "i" and initial T-B "y" as "j".

Why should one graph have two such different readings? One possible answer is that two different languages in contact with one another were both using the Chinese characters. Bilingual speakers would read the graph with both of the semantically-equivalent forms.

On the development of d-, l-, and t- for the same lexeme outside Sino-Tibetan, cf. Indo-European \*doghwa- > Irish tenge, Old Latin dingua > Latin lingua `tongue' (Carl Darling Buck. 1949. A Dictionary of Selected Synonyms in the Principal Indo-European Languages, p. 230. Chicago: University of Chicago Press).

6Linghua has been identified by Wang (1979a:137) as a "mixed" Chinese dialect spoken by the Ling people in Guangxi, but he did not classify it under any of the major dialect families.

This is a rather simplified reconstruction. If we take the phonetic [ ] as indicative of the historical development of the root's rhyme, then it would be reconstructed as Ancient Chinese \*li (Wang Li) or \*lixi ( A) / \*liei ( B) in Chou Fa-kao's system (Chou Fa-kao. 1984. Zhongguo Yinyunxue Lunwenji, Table 1. Hong Kong: Chinese University of Hong Kong Press). Karlgren (1966:258) reconstructs Archaic Chinese \*liad (GS#519a-f) which shows a close parallel to Bodman and Baxter's Old Chinese \*?liet 'tongue'.

B Lew Ballard's recent fieldwork in southern Thejiang turned up the following items: Longquan tchy4z lie745 'tongue'; Longquan lie44, Hencheng lie44 'lick'. Classification of these dialects is uncertain.

9 Li (1977:125) reconstructs *Proto-Tai* \*dl- for `lick'.
